

# VTSurvey

... is a **web-based** tool which enables **end users to autonomously create and run online surveys**, feedback or registration forms. By providing a forms-based visual editor, the use of VTSurvey **requires no programming knowledge** or skills in HTML.

VTSurvey's built-in user management system enables it to serve large organizations and **facilitates collaborative survey development** and administration. For example, at Virginia Tech this software is used to implement survey.vt.edu a web-based service which is currently serving over 3000 **Virginia Tech** students, faculty and staff with their survey needs. VTSurvey is based on JavaServer Page (**JSP**) technology. The **open-source** software is available for **free** and has been **translated into 10 languages** ranging from French to Japanese.
